DR. JAMES McQUIGG 1920-1985

Dr. James McQuigg, an internationally known climatologist, died unexpectedly Tuesday, Nov. 12, 1985, at his home in Columbia, Mo.

Born Sept. 2, 1920, in Schaller, Iowa, to Walter and Doris McQuigg, he attended local schools, graduated from Schaller High School in May 1937 and from Cornell College in Mount Vernon, Iowa, in 1941. He taught school in Iowa until the attack on Pearl Harbor, when he enlisted in the Army Air Corps and took training in meteorology at the University of Chicago. Mr. McQuigg served overseas with an advance weather battalion and crossed the channel on D-Day plus 2. He served in the military until November 1945.

He joined the National Weather Service and was stationed in Kansas City and Des Moines, Iowa, until called back into service during the Korean War. After the war, he was with the weather service in Washington and Omaha, Neb., coming to Columbia in 1956 as a state climatologist. He received his Ph.D. in atmospheric science from the University of Missouri-Columbia, in 1964.

McQuigg was a professor at the University of Missouri-Columbia in atmospheric science, retiring in 1976. He was a fellow of the American Meteorological Society. He received a Gold Medal Award from the Department of Commerce in 1975 for his work. In 1974 he helped establish NOAA's Center for Environmental Assessment Services in Columbia and served as director until his retirement. He then began work as a certified consulting meteorologist with an office in Columbia.

Surviving are his wife, two daughters, three stepchildren, a brother, three sisters and two granddaughters.

The family suggests memorials to Central Missouri Children's Diabetic Camp, P.O. Box 1942, Columbia, Mo. 65205.

NCDC BRIEFS

\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$
\$ B U L L E T I N \$
\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

The dates for the 1986 American Association of State Climatologists Meeting have been moved to Wednesday and Thursday, August 13-14, 1986. The change was necessitated by a move to another hotel that met government per diem standards. The new beginning date for the 1986 Climate and Water Management Conference is Monday, August 4, 1986.

\$

ELECTRONIC MAIL ORDER PROCEDURES

"MCI MAIL" is a new service being offered by the National Climatic Data Center (NCDC) to customers who wish to place orders for data or to obtain information concerning services available. Since all orders for data must be paid in advance of processing, the following prepayment methods are available to customers:

CREDIT CARDS

NCDC currently accepts MASTERCARD and VISA. AMERICAN EXPRESS will soon be available. When placing an order via "MCI MAIL" simply include your card number, expiration date, and exact name of the individual or business as it appears on the card. If you are unsure of the cost of the data being ordered, you should specify an upper charge limit. If the cost of the data exceeds your specified limit you will be notified either by "MCI MAIL" or by telephone. (Always include your name, telephone number, and firm in your correspondence.)

OPEN ACCOUNTS

An open account consists of money (\$100 minimum) deposited with NCDC from which costs of processing data requests are subtracted upon completion of each order. This procedure eliminates the need to send in payment with each order. The customer is given an open account "Customer Number" which is referenced by the customer for charging each order against. After an order is completed it is sent to the customer along with a transmittal detailing the costs of the order and showing the balance remaining in the account. An open account may be established by sending a check for at least \$100 payable to "DOC/NOAA/NCDC" to NCDC along with a letter requesting that an open account be established for you. An open account may also be established via "MCI MAIL" by using your credit card as mentioned above. You will be notified when your account has been depleted if additional funds are needed to complete an order.

If additional information is required you may contact us through "MCI MAIL." Our user name is "NCDC." You may write or call us at: National Climatic Data Center, Federal Building, Asheville, NC 28801, telephone: 704-CLI-MATE.

\$

NATIONAL CLIMATIC DATA CENTER
STATE CLIMATOLOGIST EXCHANGE PROGRAM

The NCDC/SC Exchange Program has finished another very successful year. A total of nine State Climatologists and/or Assistant State Climatologists participated in this year's program and, as in last year's program, there was one period when several SC's were here at the same time. They were Dr. Joseph M. Caprio (Montana), Mr. W. Joseph Moyer (Maryland), Mr. Harry J. Hillaker, Jr. (Iowa), and Dr. Gaylen L. Ashcroft (Utah). Based on their remarks and comments, the coincident period of their visits was very beneficial to each in that it allowed a real-time sharing of new information particularly in the area of the station history files. This in no way is meant to diminish the importance of those other participants who were here at other times during the year; rather it is to point out the additional benefit of such an interaction of the State Climatologists.

ALABAMA

Dr. Richard McNider, State Climatologist from the K.E. Johnson Environmental and Energy Center of the University of Alabama-Huntsville, visited NCDC for several weeks as part of the NCDC and SC Exchange Program. In addition to his work on Alabama station histories, he also was able to transfer some digital data sets from the NCDC library to diskettes. Using this transferred data, Dr. McNider developed some user-specific programs that could be run on a personal computer.

Dr. Richard McNider

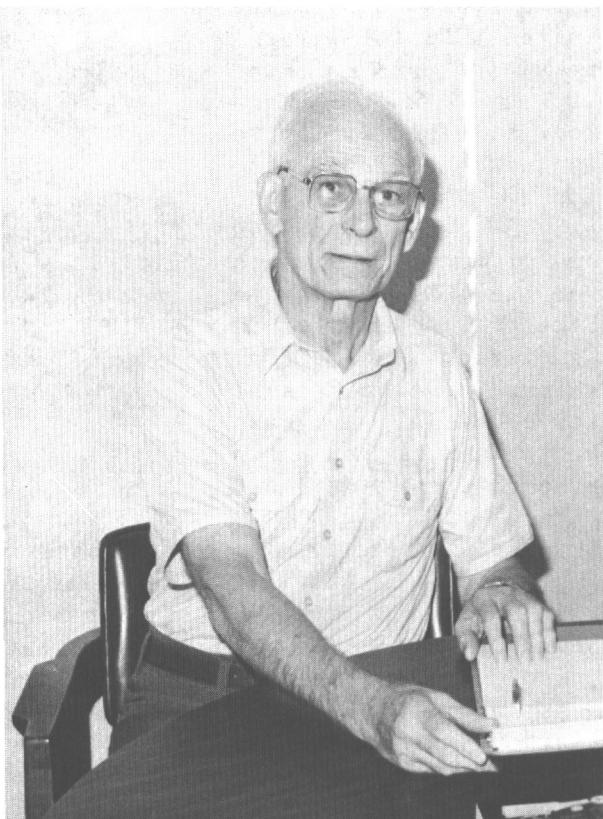

Two of those programs were for construction climatology and net precipitation. Many types of construction are weather sensitive and through the use of Dr. McNider's program, more efficient scheduling can be made for these types of construction projects. Net precipitation is defined as "the excess of precipitation over evaporation." Knowing the frequency and duration of extreme runs of excessive net precipitation events is vital in the design of holding ponds for hazardous waste.

MARYLAND

Mr. Harry Hillaker

Fortunately for NCDC and its efforts to complete a comprehensive station history file, there are several State Climatologists that returned to their position as SC even after the terminations of Federal support in 1973. Mr. Joseph Moyer is one of those, and as a result has brought an extensive knowledge of the station histories in Maryland. With the help of his son and several students, Mr. Moyer had not only researched the history of the co-op stations, but had also transferred from cards to tape those data records which had been punched in Maryland over 30 years earlier. These records were carefully edited by Mr. Moyer and were brought to NCDC for comparison where coincident records existed or for filling in those missing periods of the earlier records.

Mr. Joseph Moyer

IOWA

Mr. Harry J. Hillaker, Assistant State Climatologist, had done extensive work on Iowa Substation Histories before his visit to NCDC. This work had been done as an integral part of the Climatology of Iowa Series. With this background, Mr. Hillaker was well prepared for his continuing search of NCDC's files to complete the "Iowa Substation History." In some cases, Mr. Hillaker was able to help NCDC fill in some of its informational gaps with his own files, therefore benefiting all concerned.

MONTANA

Dr. Joseph M. Caprio also had a large number of Montana climatological records that had been punched onto cards by the Montana Agricultural Experiment Station. Some of these records date back as early as 1893. With his knowledge of these records and the stations where they were recorded, Dr. Caprio was invaluable in his assistance to NCDC and its efforts to develop a nationwide long-term climatological data base and station history file.

One of the interesting projects that Dr. Caprio researched while here at NCDC was to confirm the severity of one of the Montana winters that occurred back in the late 1870's. A search of some of the old Signal Service records showed several days with minimum temperatures in the -30° to -50° range.

Dr. Joseph Caprio

Dr. Gaylen Ashcroft

UTAH

Dr. Gaylen L. Ashcroft, Assistant State Climatologist, had also done a historical inventory of Utah stations before his arrival at NCDC. As is often the case, stations close, change names, and move from time to time. Therefore, with Dr. Ashcroft's intimate knowledge of Utah climatological stations, he was able to help NCDC personnel in the quality control of the Utah histories as well as the addition to our files of any data previously unknown to us.

As Dr. Ashcroft searched through some of the old station history forms, he was interested to see that in one of the more remote areas of the state there was one climatological station that had been open for more than 80 years and all of the observers had come from the same family.

MINUTES OF THE AASC BUSINESS MEETING

Nugget Hotel, Sparks, NV

16 Aug 85

The meeting was called to order by President John Griffiths at 3:00 p.m.

The minutes of the 1984 Annual meeting were approved as published in the October 1984 State Climatologist.

President Griffiths remarked that all committees have been active. He commended them for their work and all members for responding to questionnaires and commenting upon reports. As long as members are willing to participate, we will have a viable and useful organization. All members are encouraged to nominate people who are active in climatology and interested in the State Climate Programs for associate membership. He also announced that Bill Bartlett and Murray Mitchell have been approved for Honorary Life Membership. Since neither was able to be at the meeting, Grant Goode received the certificate for Bill and Tom Blackburn received the certificate for Murray.

All present expressed thanks to John James for the meeting arrangements.

Secretary-treasurer Myron Molnau reported that there is \$1395.66 in the Arcade Credit Union and \$3683.05 at First Union Bank, both in Asheville, for a total of \$5078.71 as of 1 August 1985. Expenses for the past year totaled \$618.12 for one trip each by the President to Washington, D.C., and the President-elect to the Woods Hole Workshop.

The checking account at First Union will be closed out soon and all funds kept in an interest bearing checking account at the Arcade Credit Union. It was also announced that a copy of PFS:File will be purchased to track membership and address changes. This program will then go to each succeeding secretary-treasurer. The membership list will be purged of all non-dues paying associate members sometime this winter. This time frame will allow plenty of time for Associate Members to pay their dues.

There were 14 Associate Members, 24 SC's and 9 non-members attending the meeting. Since the Nugget did not charge for the meeting rooms, no registration fee was charged. Any costs beyond income from the banquet and tour will be taken from the treasury.

The Goals Committee report was given by John Griffiths. He said we need to be careful to distinguish between goals and objectives. The full report will be in the State Climatologist. The new chairman will be Glenn Conner.

The Education Committee report was given by Wayne Wendland. The initial draft of their report was in the January newsletter. There are two lists of recommended courses for students who wish to prepare for a position in one of the SC offices or in any service-oriented climatological position. The first list is of highly recommended courses while the other is a choice of more specialized courses.

Considerable discussion followed as to whether a Master's or PhD degree is to be recommended. It was pointed out that the majority of the SC's are part of the academic community where a PhD is the standard. Wayne will incorporate all of the discussion in a new draft which will be circulated via the next Newsletter.

It was decided that the final approved version be formally published somewhere to give it wide publicity and that copies be sent to departments that provide climatological training.

Gail Bingham gave the Computer Committee report. He raised questions regarding using the CHEF format as a standard of interchange. He will also inquire further into the CLICOM computer system at NCDC.

Ken Hubbard briefly explained the Instrumentation Committee report. The report deals with the choice of a standard set of elements to be collected by automated stations. Included is also data resolution and a list of supplementary elements. The final report will go out with the next Newsletter.

The Publication Committee report was given by Paul Waite. He reviewed the status of NCDC publications with several comments about each. In the CD's, the divisional snowfall values need improvement, the SD publication needs more data from the SC's, and the HPD's, while still late, are improved over a few years ago.

Bob Muller reported for the Regional Program Committee. Much discussion took place regarding the regional programs and their relation to the SC programs. Some felt no need for them while others thought they were useful. As in the SC programs, there is great variability. Gail Bingham stressed the importance of cooperation among the SC's and NWS. It was also suggested that AASC write a letter to Dr. Hallgren, NWS, regarding the importance of climatological data.

No new business being at hand, the Nomination Committee, chaired by Russ Mather, reported (in a most humorous manner) the following nominations:

Dave Miller - President Elect
Myron Molnau - Secretary/Treasurer

They were elected by acclamation.

New Associate Members nominations were then called for and the following were nominated and elected:

Harold Klieforth (NV) by John James
Steve Doty (NC) by Myron Molnau
Richard Snyder (CA) by Bill Mork
John McLaughlin (LA) by Bob Muller

The Nomination Committee for next year will be John Purvis, Kelly Redmond, and Wayne Hamberger.

It was agreed that the AASC accept the invitation from Ken Hadeen to have next year's meeting in Asheville during the series of conferences that NCDC is planning in August.

The meeting adjourned at 5:00 p.m.

Myron Molnau, Secretary-Treasurer

REPORT OF GOALS COMMITTEE
AMERICAN ASSOCIATION OF STATE CLIMATOLOGISTS

GOAL 1:

Promote cooperation between State Climatologists and those Federal, state, and private agencies whose functions include the collection, analysis, and dissemination of climatic information.

OBJECTIVE 1:

Act as the primary source for Federal agencies to determine State Climatologists' opinions, public service, needs, and problems.

OBJECTIVE 2:

Maintain close cooperation with NOAA, NCPO, and NCDC in matters concerning state climatology programs.

OBJECTIVE 3:

Include appropriate Federal, state, and private agencies in the agenda of annual AASC meetings for presentations.

OBJECTIVE 4:

Assure a good visibility of the AASC within each state.

OBJECTIVE 5:

Assure that a current list of State Climatologists is distributed to appropriate Federal, state, and private agencies.

GOAL 2:

Facilitate exchange of information among State Climatologists.

OBJECTIVE 1:

Compile a list of publications by members and State Climatologists' offices and provide the list to the NCDC.

OBJECTIVE 2:

Conduct a survey of climatic work done by State Climatologists and maintain an inventory of this work.

OBJECTIVE 3:

Encourage members to provide articles to the State Climatologist journal and to exchange information about innovative uses of data to enhance services in each state.

GOAL 3:

Provide mutual assistance in the development of effective State Climatologist programs.

OBJECTIVE 1:

Institute committees to address problems and items of current interest.

OBJECTIVE 2:

Develop a model "Governor's Briefing Book" for use by State Climatologists in presenting their products and services.

Proposed Resolution to the AASC

from the Committee on Education

State and Regional Climatologists must: work with a wide variety of users who request climate data and information; be innovative to provide useful products to satisfy the specific needs of the users; interpret scientific data; and be adept at both verbal and written communications. We present the following statement as a summary of the training that best prepares a State or Regional Climatologist. We recognize that there are vast differences between the State Climatology program from one state to another; however, training or experience in all of the following areas will best prepare an aspiring State Climatologist.

Introductory Meteorology
Synoptic Meteorology
Dynamic Meteorology
Meteorological instruments
Regional climatology
Computer programming, including
data base handling
Statistics, including analysis
of variance, time series,
and multivariate analysis

Climatological methods of Applied
Climatology
Micro-meteorology, climatology
Physical-meteorology, climatology
Mathematics through differential eqtns.
Physics
Speech and writing

Because of the duties involved, a masters degree or equivalent is appropriate for State and Regional Climatologists; however, since many State Climatologists are also appointed in university departments, a Ph.D. is often required.

A State Climatologist encounters a diversity of climatological data applications; therefore, the following courses or equivalent experience would be of additional value:

Agricultural Climatology
Air Pollution Climatology
Oceanography
Applications of Climatological
Data

Hydrology
Bioclimatology
Climatological Hazards
Marine Climatology
Economics

We further recommend that students aspiring to a State or Regional Climatologist position spend at least one semester as an intern at one of the State Climate Centers, the National Climatic Data Center, or a Regional Climate Center. This practical experience will acquaint the student with the type of inquiries received by state or regional climatologists, and give the intern experience with the variety of publications available. Prior to serving such an internship, the student would write a proposal to the intended intern facility with assistance from his/her major professor. This proposal would serve as the basis for evaluation at the conclusion of the internship. Course credit could be arranged through the student's home institution as independent study.

AASC INSTRUMENTATION AND DATA STANDARDS

Committee Report

August 16, 1985

Committee: Gail Bingham (UT), Douglas Clark (WI), Richard Davis (NCDC), Kenneth Hubbard (NE) - Chairman, Kenneth Kunkel (NM), Myron Molnau (ID), Fred Nurnberger (MI), and John Vogel (IL)

Statement of the Problem:

The recent advances in technology have made weather data loggers and communication devices affordable to a greater number of meteorologists and climatologists. It has never been easier to collect such large volumes of data from so many instruments. The problem is that new weather stations and networks are being placed in the field without uniform coordination of formats for sampling and calibrating. Guidelines for setting up automated weather stations are needed now in order to assure that comparative and historical climatology will be possible in the future.

Goals:

The aim of this Committee in 1984-85 was to set forth guidelines that would help to standardize the data taken from the rapidly increasing number of non-federal weather stations with particular emphasis on automated stations. In this regard, the following set of objectives were set forth:

- 1) Define standards for a minimum set of weather observations so that comparable data are taken by all federal, state and private sector personnel who subscribe to these standards.
- 2) Define appropriate calibration techniques and other maintenance procedures that will lead to acceptable levels of accuracy.

Although the Committee worked toward developing specific standards for a minimum observation set, it felt that AASC should also encourage flexibility in the collection of non-standard data that may be needed to define weather effects on physical or biological processes.

Progress:

The Committee has drafted two handouts for potential future use. The first deals with sampling guidelines - how often to sample, what mathematical operation to apply to combine the samples, and the data output interval. The second handout deals with suggested measurements, instrument types, accuracy and installation heights. These handouts are submitted with this report.

DRAFT (8/7/85)
STANDARDS FOR INSTRUMENTATION
AT AUTOMATED STATIONS

<u>Measurement</u>	<u>With</u>		<u>Accuracy</u>	<u>Installed At</u>
	<u>A.C. Power</u>	<u>D.C. Power</u>		
Air Temp	Thermistor	Thermistor ¹	0.25C	1.5 m
Soil Temp	Thermistor	Thermistor	0.25C	-10 cm
Global Radiation	Eppley Type	Silicon Cell Pyranometer	2%	2 m
Wind Speed	Cup Anemometer	Cup Anemometer	5% and 0.5 m/s Startup	3 m
Wind Direction	Vane	Vane	2 deg.	3 m
Precipitation ²	Weighing Gage	Tipping Gage	5%	0.5-1 m
Relative Humidity	Aspirated Psychrometer	Pope Sensor ¹	5%	1.5 m

1 Appropriately shielded

2 Preferably shielded

DRAFT (8/7/85)
DATA LOGGING STANDARDS FOR
SETTING UP AUTOMATED WEATHER STATIONS

Basic Standards

Parameter	Sample Frequency	Operation	Storage Interval
Air Temp	1 min.	Average	1 hour
Soil Temp	1 min.	Average	1 hour
Global Radiation	1 min.	Sum	1 hour
Wind Speed	Pulsed	Sum	1 hour
Wind Direction	1 min.	Vector Direction	1 hour
Wind Velocity	1 min.	Vector Magnitude	1 hour
Precipitation	Pulsed	Sum	1 hour
Relative Humidity	1 min.	Average	1 hour

Auxiliary Suggestions

Net Radiation	1 min.	Sum	1 hour
Soil Moisture	1 min.	Average	1 hour
Precipitation Rate	Pulsed	Maximum Total (1 min.)	24 hour
Temperature	1 min.	Maximum	24 hour
Temperature	1 min.	Maximum	24 hour
Wind Speed	Pulsed	Maximum Total (1 min.)	24 hour

AASC PUBLICATIONS COMMITTEE REPORT

Committee Members: John Purvis, Earl Kuehnast, Joseph Moyer, William Haggard, Grant Goode and Paul Waite (Chairman)

The committee was tasked to study and evaluate those climatological publications which are used (or needed) by State Climatologists and other applied climatologists for providing climatological services and useful information to climatologists.

The primary source of operational climatic publications is the National Climatic Data Center (NCDC). Other sources include NOAA, SC offices, Regional Centers, the American Meteorological Society, National Weather Association, the American Weather Observer and the Heldref Publications (*Weatherwise*). The most used data information sources (primarily NCDC publications) were most studied by this committee.

This report is primarily based on internal committee surveys since membership response to the survey included in President Griffiths' spring letter was minimal.

Relative to the NCDC publications, the Committee commends the NCDC for the dozen or more excellent publications printed during this year. See attached list for a reminder of some of the excellent non-recurring publications of the past year. The previous year's set of various normals were likewise quite as valuable to applied climatologists. Further, we commend the NCDC for the series of very useful articles in professional publications. Too, we would be remiss not to mention the excellent quarterly medium, The State Climatologist, now in its 9th year. This is a most valuable publication for State Climatologists and other readers. For example, see the April 1985 (Vol. 9, No. 2) which nicely described the NCDC Cooperative Branch and featured Dr. Helmut Landsberg's article on "How State Climatology Evolved in the U.S."

The excerpt from the Virginia Climate Advisory, Spring 1985, we believe aptly describes the attitude of all State and Applied Climatologists -

EDITORIAL: WHERE CREDIT IS REALLY DUE...AND SHOULD STAY

It's easy to come up with a snappy article and graphics when you don't have to do much of the legwork--and that's what applies to this story on Virginia drought.

For the last few years, researchers at the National Climatic Data Center (NCDC) have produced some of the world's best climatic histories. Many will serve as the standard references on climate and its variability for generations to come.

It's not just their work on drought: Tom Karl and his co-workers have produced landmark documents on such diverse topics as temperatures, precipitation, energy use, and...you name it. There are other names involved, too, but to list them would be boring. My hat, and those of the other 44 State Climatologists, often doffs in their direction when we open up the day's mail.

One of my jobs as an academic researcher is to glean from the volume of climatic literature what might be useful and informative to my clients. And it turns out that what comes from NCDC just happens to be the best.

Some simple analyses suggest this work isn't immediately cost-effective. But in the long run, the scientific and economic value is substantial enough to be incalculable from the limited perspective of the current day. Climatic services are, by definition, farsighted; termination of them is analogously nearsighted.

The Committee evaluation and recommendations regarding the continuing NCDC publications:

Climatological Data (CD). We continue to urge more State Climatologists to evaluate their need for historical documentation of unusual and/or notable weather and climate events in the form of a narrative in the monthly CD. We believe this is an important public service, both for the casual user and the researchers and historians. Presently the NCDC does not include the CD narratives in the archived CD microfiche due to cost and the formatting changes that would be required.

The CD format, in use since July 1981, is preferred by some users because of the larger print, but most others report that the split precipitation arrays on two pages makes it difficult to handle when reading data by telephone for several sites for periods requiring split page visual referencing. The CD divisional snowfall values are generally rated as meaningless in most states. In at least one state, the State Climatologist computes the state and division averages from all the useful data.

In summary, we recommend greater SC attention to narratives for inclusion in CDs and for the NCDC to improve division snowfall values, when funding permits, but not at the expense of present services.

Storm Data. The expanded format beginning with July 1981 and Dr. T. Theodore Fujita's contribution have greatly increased the value of this publication. However, all State Climatologists should be aware of the mission and the value of this publication. It is expected to officially document the more damaging storms and all human deaths and injuries associated therewith. It does not, for example, provide a very good crop-hail climatology base. The same may be said for certain other data bases such as windstorms, heavy rains or snowstorms.

Some climatologists believe that documentation could be better done at the State Climatology Offices. In a few cases the Committee agrees, but as yet, we believe that many SC offices are yet understaffed to capably prepare severe storm data even if adequate funding were available. However, should the NWS suffer reductions in staffing at state forecast offices, this may be a viable alternative at several SC offices. Meanwhile, we recommend that SCs and the NWSFO (NWS Forecast Offices) collaborate as much as possible so that the SCs will better understand the reporting procedures and the NWS will better

understand the data needs and formatting procedures which will make the Storm Data more useful to the consumer. We believe it desirable that the SC be advised of the NWS severe weather preparedness programs, receive the publications associated with it and where possible be a part of the severe weather preparedness programs contributing as a knowledgeable climatologist about severe storms.

Hourly Precipitation. Publications continue well behind the useful schedule, but are improved. In Iowa about 20% of the 66 or 67 sites are normally missing - an improvement over a few years ago.

The Publications Committee recommends to the AASC that negotiations be initiated with NOAA to provide SCs the NOAA climatological, hydrological and weather technical publications, - particularly those which will improve our public service and research programs.

The committee also reviewed the need for an applied climatology publication more properly designed to the user need of the State Climatologist and one that should serve as an information exchange about transferrable State programs and solutions to selected problems. About a half century ago the Monthly Weather Review printed a number of similar operational, applied articles; however, a number of related publications are available to State Climatologists including the Journal of Climate and Applied Meteorology, Monthly Weather Review, National Weather Digest, Weatherwise and The State Climatologist. The Committee recommends that further study and identification of special and unmet needs be evaluated prior to recommendation in this area.

In conclusion, this committee believes we should be well pleased with the increased number of NCDC publications and published studies available to us. The Committee continues to recommend increased SC involvement with the NCDC publications by contributing narratives, reviewing publications and individually documenting to NCDC both those areas that should be preserved and those areas in which improvement is desired and important. In so doing, we can assist NCDC in achieving their goals for better products within their several constraints which include budget and staffing. We recommend that the AASC continue to evaluate publications.

Some Recent NCDC Publications

Climatography of the United States No. 20, Climatic Summaries for Selected Sites, 1951-80 by State.

Historical Climatology Series (HCS) 6-1. Statewide Average Climatic History by State.

HCS 3. Atlas of Monthly and Seasonal Temperature Departures for the Long Term Mean
 (1895-1983) for the Contiguous United States

3-2 Winter	3-4 Summer
3-3 Spring	3-5 Fall

HCS 3-6 Atlas of Monthly Palmer Hydrological Drought Indices (PHDI), (1895-1930)
for the Contiguous United States

HCS 3-7 Atlas of Month PHDI (1931-1983) for the Contiguous United States

HCS 3-8 Atlas of Monthly Palmer Moisture Anomaly Indices (PMAI), (1895-1930) for the Contiguous United States

HCS 3-9 Atlas of Monthly PMAI (1931-83) for the Contiguous United States
Climatological Data 1984 (each State) contains 1984 monthly PMAI

HCS 3-10 Atlas of Monthly Palmer Drought Severity Indices (PDSI). 1895-1930) for the Contiguous United States

HCS 3-11 Atlas of Monthly PDSI (1931-83) for the Contiguous United States.

The State Climatologist

REPORT OF REGIONAL OPPORTUNITIES COMMITTEE
AMERICAN ASSOCIATION OF STATE CLIMATOLOGISTS

The Regional Opportunities Committee included Anthony Brazel (Arizona), Nolan Doesken (Colorado), John Purvis (South Carolina), Peter Robinson (Univ. of North Carolina), Norton Strommen (USDA), and Robert Muller, Chairman (Louisiana). We exchanged thoughts and ideas informally by phone and letter, and John Purvis and I met early during the AASC annual meeting at Reno.

In general committee members agreed:

that we were disappointed that the AASC president was not invited to either of the workshops at Tallahassee or Woods Hole until nearly the last minute when invitations were extended after inquiries by AASC members and the executive committee;

that the NCPO collection, publication, and distribution of letters by SCs to Alan Hecht regarding regional climate centers and the Intergovernmental Program represents the most informative summary of the wide-ranging opinions of the SCs;

that the reports of the Woods Hole workshop and meetings by Howard Hill, Tom McKee, and Stan Changnon at Reno were very candid and informative regarding federal agency and individual climatologists views of how to move forward with studies of the impacts of climate variability on the environment and the economy, including regional center opportunities and difficulties;

that the funding of big regional centers will have to be by the federal government rather than "upwards" by large groupings of states (it is not likely that most individual states will support service or research centers in other states);

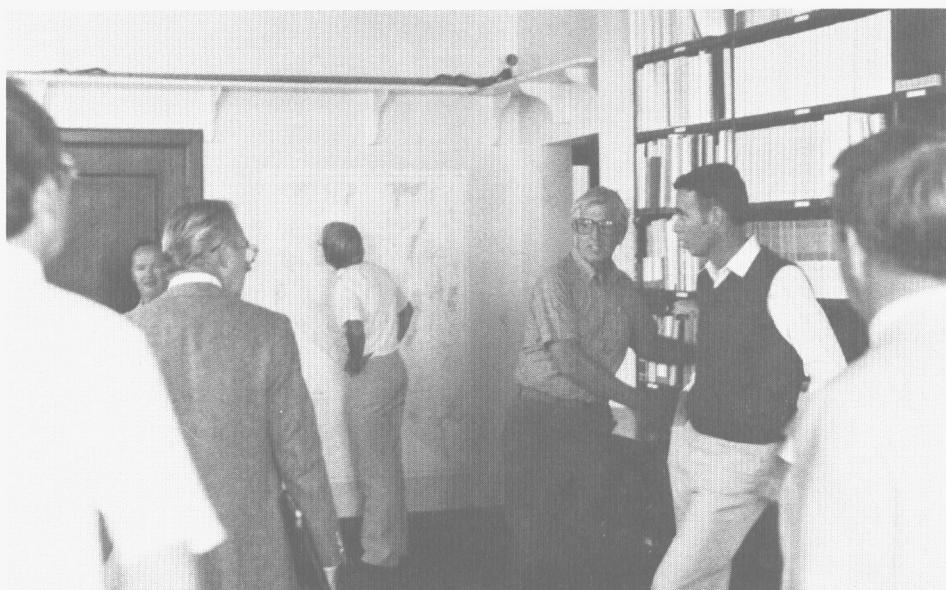

that two or more states with mutual environmental problems and professional interests are more likely to get together for some form of regional collaboration;

that the regional centers could effectively encourage climate programs in states without adequate financial resources, and even serve as the center for states unwilling to develop programs;

that it would be difficult if not impossible to obtain a consensus among the states regarding division of the country into four to eight large regional centers;

and finally, as an afterthought during the business meeting, we would urge the program chairman for next year and the local arrangement committee at NCDC to arrange for several foreign speakers to describe their respective national programs of climate studies and services with attention to the problems of regional organization.

Some of the attendees of the 1985 AASC Meeting held in the Nugget Hotel in Reno, Nevada.

Several of the attendees visited the Nevada State Climatologist Library at the Reno Campus of The University of Nevada.

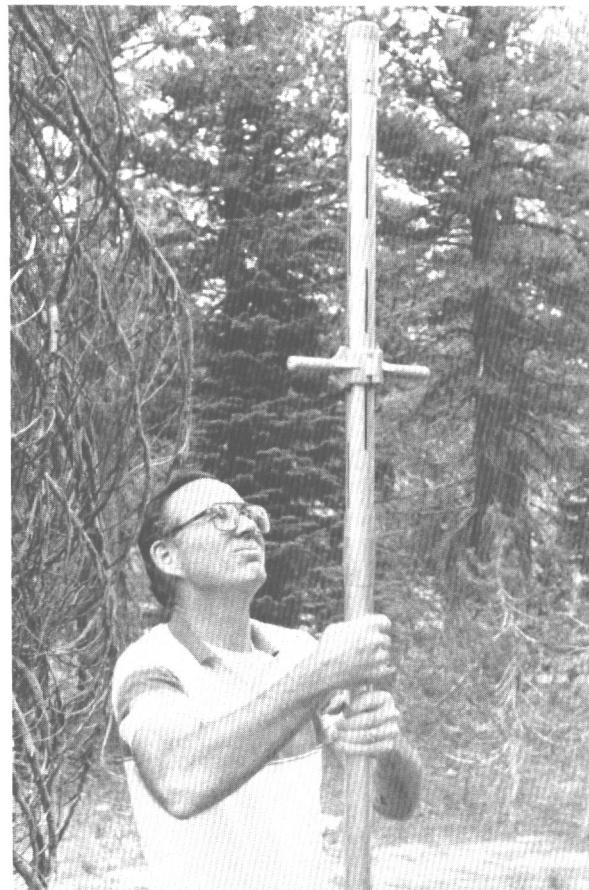

Our excellent host, Mr. John James, took most of us on a tour of the Lake Tahoe area. Seen here are members of the group standing in a meadow at Squaw Valley, California, site of the 1960 Winter Olympics.

From the top of Eagle Rock each of the hikers was presented a spectacular view NNE over Lake Tahoe.

Dr. Donald T. Jensen demonstrates a snow core device used to determine the meltwater equivalent of the snow pack.

A telemetered precipitation gauge with a windshield. This gauge is part of the SNOTEL network, and is located about 9000 feet above sea level on a pass between Lake Tahoe and Reno.

NOTE ON UNDER-ESTIMATION OF MAXIMUM TEMPERATURES
AS OBSERVED BY MERCURY-IN-GLASS MAXIMUM REGISTERING
THERMOMETERS

Mercury-in-glass maximum registering thermometers, in particular those in which the mercury column holds at the highest temperature until reset (by spinning in a Townsend support), have been in general use by cooperative observers in the United States for nearly a century. Observers are normally trained to be careful to lower such thermometers slowly and smoothly to their vertical reading position, and to recognize "retreaters" in which the restriction in the tube that breaks the mercury column allows leakage back into the bulb end other than at the time of resetting. With these precautions such thermometers are considered highly reliable indicators of the maximum temperature reached since the last resetting.

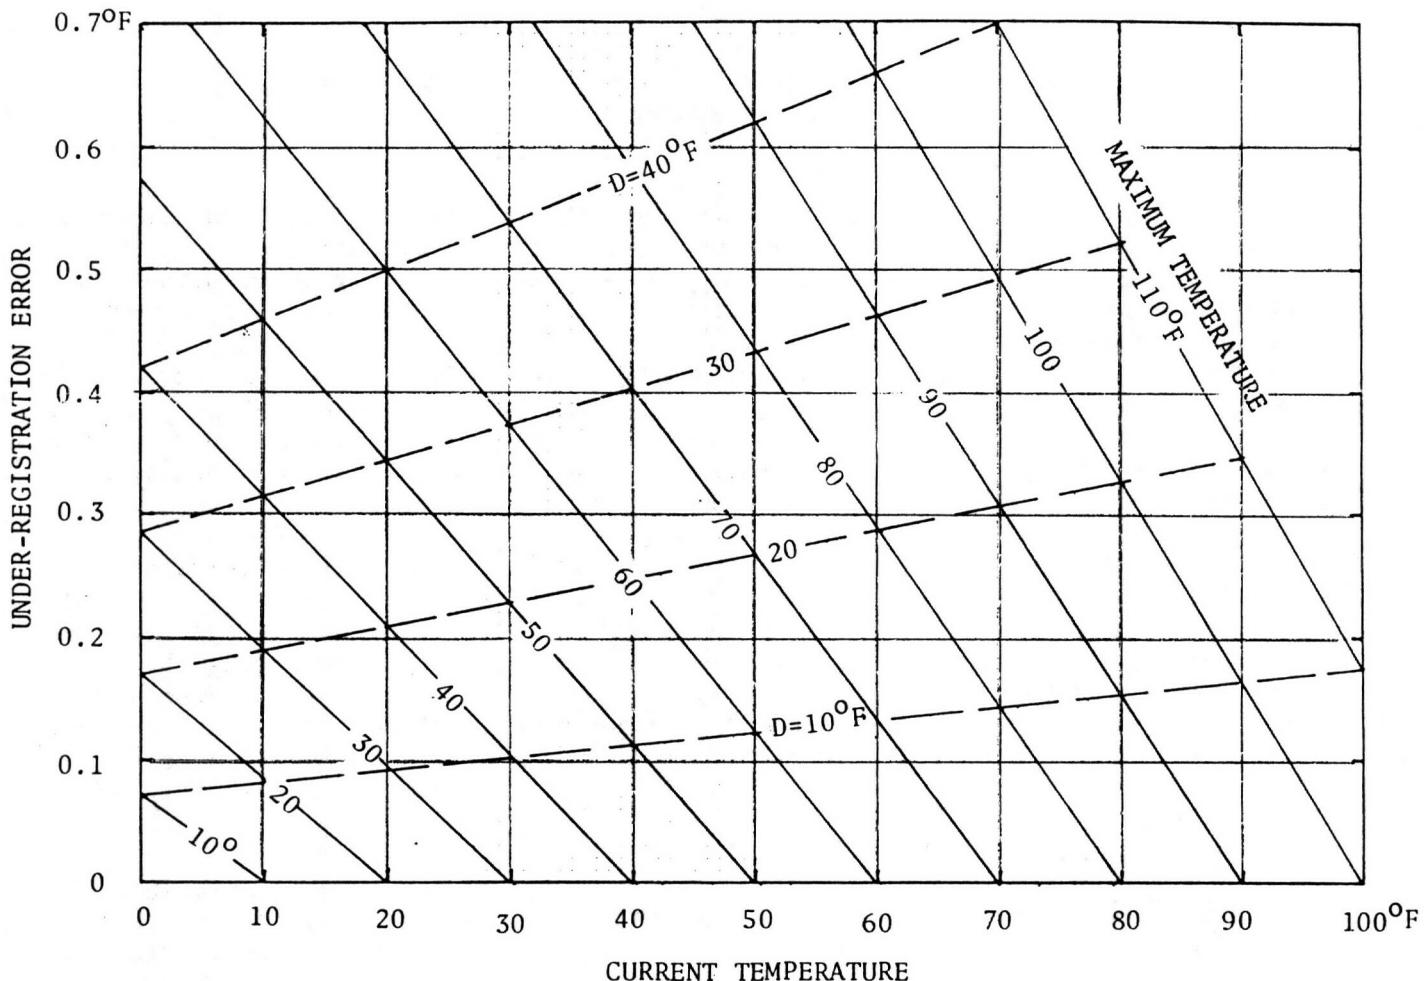

There exists, however, a systematic error in maximum temperatures as registered and reported by use of such thermometers. Although usually limited to a few tenths of one degree F, in some situations the error can approach one full degree F and it is always in the direction of under-registering the true maximum temperature. Inasmuch as there seems to be no general guidance provided to cooperative observers and to users of cooperative-station temperature data, with respect to the error noted here, the source and significance of the error together with a nomogram to estimate its magnitude are the subject of this note.

Source of error. The scales on mercury-in-glass maximum registering thermometers are generally accurate (to within a few tenths of one degree F) referred to conditions when the maximum temperature is equal to the current temperature (i.e., the temperature at time of reading). In normal observing situations, however, the current temperature is substantially lower than the maximum temperature retained by the thermometer since it was last reset. At the current temperature, the mercury column above the constriction in the thermometer tube suffers a small thermal contraction such that the indicated maximum temperature is decreased below that which would have been indicated, had the thermometer been read when the current temperature was equal to the maximum temperature. If α is the thermal expansion coefficient of mercury, L is the length of the mercury column (in indicated $^{\circ}\text{F}$) between the maximum temperature point and the location of the constriction in the tube (nominally about -60 or -65°F in typical thermometers), and D is the difference between the maximum temperature and the current temperature, then the error (d) in the indicated maximum temperature is given by

$$d = \alpha \cdot L \cdot D, \quad \alpha \approx 10^{-4} ({}^{\circ}\text{F})^{-1}$$

and the true maximum temperature is obtained by adding d to the indicated maximum temperature.

Significance of error. Especially in light of larger errors associated with station exposure and thermometer shielding (from solar radiation effects) the error noted here is not normally significant. However, in the warmer months and in dry climates with a large diurnal temperature range, under-registration of maximum temperatures can approach one degree F, particularly at stations where the daily observations are made in the early morning.

NOMOGRAPH FOR FINDING UNDER-REGISTRATION OF MAXIMUM TEMPERATURE
As observed by conventional mercury-in-glass registering thermometer

Example

Indicated maximum temperature since last reset = 95.3°F
Current temperature at time of observation = 65°F
Difference, $D \approx 30^{\circ}\text{F}$

1. Enter nomograph at current temperature along bottom scale.
2. Move vertically up to intersection with maximum temperature (solid lines sloping down to right) or with D (dashed lines) using interpolation as appropriate.
3. Read under-registration error from left scale opposite intersection point (0.5°F in this example).
4. Add error to indicated maximum temperature to find "true" maximum temperature ($95.3 + 0.5 = 95.8^{\circ}\text{F}$)

U.S. Historical Climatology Network

Status Report, October 1985

The National Climatic Data Center (NCDC), with support from the Department of Energy, has completed the station histories and data base for 1,002 stations in the Historical Climatology Network (HCN) described in the July 1984 issue of The State Climatologist. Following are a locator map and an inventory for these HCN stations. During the next few months the data will be processed to:

- Validate all observed data.
- Serially complete time series, where possible.
- Adjust data for station relocation.
- Adjust data for time of observation bias.

Preliminary data will be available in January 1986.

Examination of the map reveals that there are some areas of the country where coverage is not adequate to perform acceptable validation/serial completion analysis, nor to describe the climate.

During 1986, we plan to add approximately 100 stations to the network with major emphasis on those areas where coverage is not sufficient to adequately describe the climate. We also plan to select approximately 60 stations in the HCN for which daily data will be digitized. These data will be used to examine time series of temperatures exceeding critical thresholds.

We want to thank all of the State Climatologists (SC's) who have suggested stations for inclusion in the HCN and reviewed the data and station histories for accuracy. In particular, we want to thank the SC's from Illinois, Maryland, Minnesota, Montana, North Dakota, and Texas who have provided data on magnetic tape to supplement our files. This project would not have been possible without your cooperation and enthusiastic support.

It is anticipated that the HCN project will be completed in August 1986, with all station histories and data through 1985 available on magnetic tape and/or listings.

Thank you for your continuing support and interest.

STATE CLIMATOLOGISTS
October 1985

ALABAMA

Dr. Richard McNider
K.E. Johnson Environmental &
Energy Center
The University of Alabama-Huntsville
Huntsville, AL 35899
205-895-6257

ALASKA

Mr. James L. Wise
AEIDC/University of Alaska
Alaska Climate Center
707 A Street
Anchorage, AK 99501
907-279-4523

ARIZONA

Dr. Anthony J. Brazel
The Laboratory of Climatology
Arizona State University
Tempe, AZ 85287
602-965-6265

ARKANSAS

Dr. John Hehr
Department of Geography
Carnall Hall 104
University of Arkansas
Fayetteville, AR 72701
501-575-3159

CALIFORNIA

Mr. William A. Mork
California Dept. of Water Resources
Division of Flood Management
P. O. Box 388
Sacramento, CA 95802
916-445-5800

COLORADO

Dr. Thomas McKee
Colorado Climate Center
Dept. of Atmospheric Science
Colorado State University
Fort Collins, CO 80523
303-491-8545

CONNECTICUT

Dr. David R. Miller
Dept. of Renewable Natural Resources
1376 Storrs Rd., Room 308 WBY Bldg.
Box U-87
University of Connecticut
Storrs, CT 06268
203-486-2840

DELAWARE

Dr. John R. Mather
Department of Geography
University of Delaware
Newark, DE 19716
302-738-2294

FLORIDA

Dr. Thomas A. Gleeson
Department of Meteorology
Florida State University
Tallahassee, FL 32306
904-644-3417

GEORGIA

Dr. Gayther L. Plummer
Institute of Natural Resources
Ecology Building
University of Georgia
Athens, GA 30602
404-542-1555

HAWAII

Mr. Manabu Tagomori
State Department of Land and
Natural Resources
Division of Water & Land Development
P. O. Box 373
Honolulu, HI 96809
808-548-7539

IDAHO

Dr. Myron Molnau
Agricultural Engineering Dept.
University of Idaho
Moscow, ID 83843
208-885-6182

ILLINOIS

Dr. Wayne M. Wendland
Illinois State Water Survey
2204 Griffith Drive
Champaign, IL 61820
217-333-0729

MAINE

Dr. James Dill
Extension Specialist
University of Maine
491 College Avenue
Orono, ME 04473
207-581-7980

INDIANA

Mr. James E. Newman
Agronomy Department
Purdue University
West Lafayette, IN 47907
317-494-8100
FTS 331-5244

MARYLAND

Mr. W. Joseph Moyer
1123A, Jull Hall
University of Maryland
College Park, MD 20742
301-454-3110

IOWA

Mr. Paul Waite
Iowa Dept. of Agriculture Weather
Service
Municipal Airport, Room 10
Des Moines, IA 50321
515-281-4062

MASSACHUSETTS

Mr. David Taylor
State Climatologist
Dept. of Environmental Management
Division of Water Resources
496 Park Street
North Reading, MA 01864
617-275-8860, ext 138

KANSAS

Dr. L. Dean Bark
Dept. of Physics - Caldwell Hall
Kansas State University
Manhattan, KS 66506
913-532-6814

MICHIGAN

Dr. Fred V. Nurnberger
MDA/Climatology Division
417 Natural Science Bldg.
Michigan State University
East Lansing, MI 48824
517-373-8338

KENTUCKY

Mr. Glen Conner
Department of Geography & Geology
Western Kentucky University
Bowling Green, KY 42101
502-745-4555

MINNESOTA

Mr. Earl L. Kuehnast
State Climatological Office
University of Minnesota
325 Soil Science Building
St. Paul, MN 55108
612-296-4214
FTS 776-4214

LOUISIANA

Dr. Robert A. Muller
Dept. of Geography & Anthropology
Louisiana State University
Baton Rouge, LA 70803
504-388-6184

MISSISSIPPI

Dr. Charles L. Wax
Dept. of Geology & Geography
Drawer 5167
Mississippi State University
Mississippi State, MS 39762
601-325-3915

MISSOURI

Professor Wayne L. Decker
Dept. of Atmospheric Science
University of Missouri - Columbia
701 Hitt Street
Columbia, MO 65211
314-882-6591

NEW MEXICO

Dr. Kenneth E. Kunkel
State Climatologist
P. O. Box 5702
New Mexico Dept. of Agriculture
Las Cruces, NM 88003
505-646-3007

MONTANA

Professor Joseph M. Caprio
Plant & Soil Science Department
Montana State University
Bozeman, MT 59717
406-994-5067

NEW YORK

Dr. Bernard E. Dethier
Atmospheric Science Unit
Box 21, Bradfield Hall
Cornell University
Ithaca, NY 14853
607-256-3034

NEBRASKA

Dr. Kenneth G. Hubbard
CAMAC
239 Agricultural Eng. Bldg.
University of Nebraska
Lincoln, NE 68583-0728
402-472-6706

NORTH CAROLINA

Dr. Jerry M. Davis
Dept. of Marine, Earth & Atmos. Sciences
North Carolina State University
Raleigh, NC 27650
919-737-7243

NEVADA

Professor John W. James
Geography Department
College of Arts & Sciences
University of Nevada - Reno
Reno, NV 89557-0048
702-784-6947

NORTH DAKOTA

Professor John W. Enz
Soils Department
North Dakota State University
Fargo, ND 58105
701-237-8576

NEW HAMPSHIRE

Professor Robert L. A. Adams
Dept. of Geography - James Hall
University of New Hampshire
Durham, NH 03824
603-862-1719 or 1718

OHIO

Professor John N. Rayner
Dept. of Geography
Ohio State University
103 Administration Building
Columbus, OH 43210-1361
614-422-2514

NEW JERSEY

Professor A. Vaughn Havens
Dept. of Meteorology & Physical
Oceanography
Cook College, Rutgers University
P. O. Box 231
New Brunswick, NJ 08903
201-932-9520

OKLAHOMA

Dr. Amos Eddy
Oklahoma Climatological Survey
University of Oklahoma
710 Asp, Suite 8
Norman, OK 73019
405-325-2541

OREGON

Dr. Kelly T. Redmond
Dept. of Atmospheric Sciences
Oregon State University
Corvallis, OR 97331
503-754-4557

PENNSYLVANIA

No SC at this time.

RHODE ISLAND

Dr. Robert C. Wakefield
Dept. of Plant Sciences
Room 313, Woodward Hall
University of Rhode Island
Kingston, RI 02881
401-792-4549

SOUTH CAROLINA

Mr. John C. Purvis
S.C. Water Resources Commission
3830 Forest Drive
P. O. Box 4440
Columbia, SC 29240
803-758-2514

SOUTH DAKOTA

Professor William Lytle
Engineering Dept.
South Dakota State University
Brookings, SD 57007
605-688-5141

TENNESSEE

Mr. Wayne Hamburger
Tennessee Valley Authority
310 Evans Building
Knoxville, TN 37902
615-632-4221
FTS 856-4221

TEXAS

Professor John F. Griffiths
Meteorology Department
Texas A&M University
College Station, TX 77843
409-845-7320

UTAH

Dr. Gail Bingham
Utah State Climatologist
Utah State University, UMC-48
Logan, UT 84322
801-750-2190

VERMONT

Dr. Leonard Perry
Hills Building
University of Vermont
Burlington, VT 05401
802-656-2630

VIRGINIA

Dr. Patrick Michaels
Dept. of Environmental Sciences
Clark Hall
University of Virginia
Charlottesville, VA 22903
804-924-0549

WASHINGTON

Dr. Howard J. Critchfield
Office of the State Climatologist
Western Washington University
Bellingham, WA 98225
206-676-3116 or 3277

WEST VIRGINIA

Dr. Stanley J. Tajchman
Division of Forestry
337 Perceival Hall
West Virginia University
Morgantown, WV 26505
304-293-3411

WISCONSIN

Dr. Douglas Clark
University of Wisconsin Extension
1353 Meteorology & Space Science Bldg.
1225 West Dayton Street
Madison, WI 53706
608-263-2374

WYOMING

No SC at this time.

Associate, Former State and Honorary

Dr. Gaylen Ashcroft
Utah State University
Logan, UT 84322
801-750-2190

Mr. William D. Bartlett
427 Old Haw Creek Road
Asheville, NC 28805
704-298-0322

Mr. Richard Becker, Jr.
9220-2 Glen Haven Drive
Anchorage, AK 99502

Dr. Bruce Berryman
Meteorology Dept.
Lyndon State College
Lyndonville, VT 05851

Mr. Tom Blackburn
9406 Baybrook Avenue
Silver Spring, MD 20901

Mr. George Bomar
Weather & Climate Section
Texas Dept. of Water Resources
P.O. Box 13087, Capitol Station
Austin, TX 78711

Mr. Norman Canfield
Dept. of Meteorology
University of Maryland
College Park, MD 20742
301-454-7372 (Office)

Mr. Eugene A. Carter
K.E. Johnson Envir. Energy Ctr.
The University of Alabama
Huntsville, AL 35899
205-895-6331

Mr. Stanley Changnon
Illinois State Water Survey
2204 Griffith Drive
Champaign, IL 61820

Mr. Charles J. Chimento
c/o Nat'l Weather Service Office
P.O. Box 5779
Jackson, MS 39208

Dr. Harold Klieforth
Desert Research Institute
Atmospheric Sciences Center
Reno, NV 89506

Ms. Ellen Cooter
Oklahoma Climatological Survey
University of Oklahoma
710 Asp, Suite 8
Norman, OK 73019
405-325-2541

Ms. Margaret E. Courain
NOAA/NESDIS
Page Bldg 2, Room 547
3300 Whitehaven Blvd.
